Preface

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee SF-006, Eye and Face Protection.

The objective of this document is to specify requirements for all goggles with plano lenses, intended for eye protection against hazards including ultraviolet and visible solar radiation, rain, snow and wind, during downhill skiing, snowboarding and other similar activities.

This document applies to downhill skiing and snowboarding goggles fitted with an insert to carry prescription lenses.

It also specifies requirements and testing for materials, performance, marking of goggles and information to be supplied by the manufacturer.

This document is an adoption with national modifications, and has been reproduced from, ISO 18527-1:2021, *Eye and face protection for sports use — Part 1: Requirements for downhill skiing and snowboarding goggles*.

The modifications are additional requirements and are set out in [Appendix ZZ](#), which has been added at the end of t

[Appendix ZZ](#) lists the modifications to ISO 18527-1:2021 for the application of this document in Australia and New Zealand.

As this document has been reproduced from an International document, a full point substitutes for a comma when referring to a decimal marker.

Australian or Australian/New Zealand Standards that are identical adoptions of international normative references may be used interchangeably. Refer to the online catalogue for information on specific Standards.

The terms “normative” and “informative” are used in Standards to define the application of the appendices or annexes to which they apply. A “normative” appendix or annex is an integral part of a Standard, whereas an “informative” appendix or annex is only for information and guidance.
