Preface

This Technical Specification was prepared by the Standards Australia Committee MB-025, Security and Resilience.

The objective of this document is to provide guidelines on methods for understanding and extending the principles of business continuity embodied in AS ISO 22301:2020 and AS ISO 22313:2020 to the management of supplier relationships. It enables an organization to develop and document the strategy to be better prepared to manage supply chain continuity.

This document is generic and applicable to all organizations. It is applicable to suppliers of products, services and resources, both upstream and downstream.

Supply chain continuity management (SCCM) specifically considers the issues faced by an organization which relies on the continuity of supply of resources as well as the ability to continue delivery of its products and services. The objective of SCCM is to protect the organization's business activities from supply chain disruption.

This document is identical with, and has been reproduced from, ISO/TS 22318:2021, *Security and resilience — Business continuity management systems — Guidelines for supply chain continuity management*.

As this document is identical with the ISO/TS 22318:2021, it is recommended that the word "international" be used for a comma when referring to a decimal marker.
